Lemma

**Lemma**: Let $G$ be a finite abelian $p$-group, and let $a$ be an element of maximal order $p$ in $G$. Then there is a subgroup $K$ of $G$ such that $G = \langle a \rangle \oplus K$. 
Lemma

Lemma: Let $G$ be a finite abelian $p$-group, and let $a$ be an element of maximal order $p$ in $G$. Then there is a subgroup $K$ of $G$ such that $G = \langle a \rangle \oplus K$.

1. Induct on the order $p^n$ of $G$. 
Strategy ("Peel off" a cyclic summand (for FTFAG))

**Lemma:** Let $G$ be a finite abelian $p$-group, and let $a$ be an element of maximal order $p$ in $G$. Then there is a subgroup $K$ of $G$ such that $G = < a > \oplus K$.

✓ Induct on the order $p^n$ of $G$.
✓ Choose an element $b \in G \setminus < a >$ of minimal order and use $b$ to construct an element $c$ of order $p$ in $G \setminus < a >$.
✓ Conclude $|b| = p$ and thus $< a > \cap < b > = \{0\}$.

4. Show $a + < b >$ has maximal order in $G / < b >$, which has order $p^{n-1}$.

5. Write $G / < b > = < a + < b >= \oplus \overline{K}$ for some $\overline{K} \leq G / < b >$. Let $K \leq G$ be the “pullback” of $\overline{K}$.

6. Show $< a > \cap K = \{0\}$ and $G = a + K$ (counting argument).
