Introduction

Language is the basis for complex communication, whether as natural language between humans or as formal language between humans and computers. In programming, different kinds of formal languages are crucial tools in all stages of development, from the logics used to specify requirements, to the programming languages used to implement algorithms, and the mathematical notations used to analyze their behavior. In this course we will study the general phenomenon of formal language by exploring the syntax, semantics, and logics of a broad range of examples, beginning with the simplest numeral notations and operator algebras and continuing through to computationally complete languages and sophisticated type systems. In addition to studying abstract descriptions of syntax and semantics, students will reinforce their understanding by implementing language-based tools in a functional meta-language.

Instructor

Fritz Ruehr, Associate Professor of Computer Science
Office: Ford Hall 208
E-mail: fruehr@willamette.edu
Phone: 503-370-6165
Course homepage: http://www.willamette.edu/~fruehr/465
Office hours: M 4:00-5:00; Fir 12:00-1:00; by appt.; ... or just drop by!

Logistics and attendance

</tbody>
</table>

Students are expected to attend all lecture sessions unless arrangements have been made in advance—lab session attendance may vary somewhat depending on scheduling issues and need, but you should make sure that you have some lab time available each week. You are in any case responsible for all content, changes in assignments or policies, etc., which are made during the course of scheduled classes. I will try to make important announcements available on the course homepage or by e-mail.

Suggested textbooks (not required!)

No formal textbook will be used in this class, so your primary sources for information will be lecture (and the notes you take there), class hand-outs, lab assignments and possibly readings assignments based on web-accessible material. You should be careful to make arrangements to get lecture notes from someone else in class if you cannot attend.

If you need a reference for the Haskell programming language (which we will use throughout the course), I recommend one of the following. The first has been used in other Willamette courses, so used copies may be available; the second is available for physical purchase, but is also free on-line!

Other on-line resources

The course homepage (address above) will fill out over the semester. Among other things, it will include links to on-line references which will provide background for many topics in the course. A Haskell system and editor are available in lab—for downloading a system for use at home, see links on the course homepage.
Due dates

Homework will generally be due one or two class sessions after it is assigned—on occasion, class-wide extensions may be announced. If you think you will not be able to complete an assignment, contact me as soon as possible: extensions may be granted for official business, emergencies, etc. It is better to ask for an extension before the due date, if possible.

Exam

The final exam is scheduled for Saturday, May 9, 2015, from 2-5 pm. The mid-term exam date will be announced in lecture.

(Note: please make your summer travel plans accordingly!)

Grading policy

Grades will be based on exams, in-class quizzes, homework assignments, programming labs, and class participation. Individual grades will be given in numeric form and then combined to determine a composite at the end of the semester, according to the numeric weights listed below. I grade on a modified curve basis; that is, I grade students relative to each other’s performance, but without requiring a “fit” to a normal curve. I am happy to give out all high grades (and will give out all low grades if necessary), depending on the absolute performance of the class as a whole.

I plan to give one midterm exam and a longer, comprehensive final exam during the regular scheduled period, as well as perhaps a few shorter in-class quizzes. The weights used for the final grade will be:

• 45% for the exams (split equally for the midterm and final);
• 25% for written homework and any in-class quizzes; and
• 20% for programming labs; and
• 10% for class participation.

Collaboration and related issues

All work you hand in should be your own. You are allowed (and encouraged) to seek help from other students for general study purposes, but you should never allow other people to do your work for you. You are also responsible for attributing any material you quote from outside sources, including other students (this is especially relevant for homework assignments). Violations of these rules will result in penalties according to the usual College policies, but would normally include at least a failing grade for the assignment, and possibly a failing grade for the course.

Topics and schedule

See the attached calendar for a list of topics and a (tentative!) schedule.
**College-wide policies**

**Accreditation information**
In accordance with new college accreditation initiatives, I am listing here the **student learning objectives** and **outcome indicators** associated with this class (SLO numbers are relative to CS Department norms):

- **CS/SLO #2:** “Students will achieve proficiency in Computer Science skills (fundamentals of programming, computer organization, architecture, algorithms, theory, designing and implementing software).”
- **CS/SLO #5:** “Students will demonstrate the ability to work independently to analyze and solve problems.”

**Time commitment for this course**
“Willamette's Credit Hour Policy holds that for every hour of class time there is an expectation of 2-3 hours work outside of class. Thus, for a class meeting three days a week you should anticipate spending 6-9 hours outside of class engaged in course-related activities. Examples include study time, reading and homework assignments, research projects, and group work.”

**ADA compliance**
“Please tell me about any disabilities that will affect your participation in this course. I will respect any accommodations authorized by the Office of Disabilities Services.”

**Plagiarism and cheating**
For full details of the College policies and procedures regarding plagiarism and cheating, see:

[www.willamette.edu/cla/catalog/resources/policies/categories/plagiarism_cheating.php](http://www.willamette.edu/cla/catalog/resources/policies/categories/plagiarism_cheating.php)

**Important dates**
For the official college academic calendar for this year, see:

[http://www.willamette.edu/dept/registrar/calendar/cla/index.html](http://www.willamette.edu/dept/registrar/calendar/cla/index.html)
