CS 145 Images and Imagination

Exam 1 Solutions

1. (2 pts each, 6 pts total) The following Processing code draws a bright blue rectangle.

```java
colorModel(HSB,100);
fill(65,100,100);
rect(0,0,100,100);
```

Suppose you are given the following options for replacing the above fill command:

   a. fill(100,100,100);
   b. fill(65, 100, 30);
   c. fill(65, 30,100);
   d. fill(90,65,100);

i. Which option(s) will result in a light blue rectangle? _____c_______
ii. Which option(s) will result in a deep, dark blue rectangle? _____b_______
iii. Which option(s) will result in a color that is not blue? _____a,d_______

2. (2 pts each, 6 pts total) The following Processing code also draws a rectangle.

```java
colorModel(RGB,255);
fill(0,0,0);
rect(0,0,100,100);
```

Suppose you are given the following options for replacing the above fill command:

   a. fill(0,0,0);
   b. fill(255,255,255);
   c. fill(0,100,0);
   d. fill(0,0,255);
   e. fill(255,0,0);
   f. fill(125,125,125);

i. Which option will result in a white rectangle? _____b_______
ii. Which option will result in a gray rectangle? _____f_______
iii. Which option will result in a red rectangle? _____e_______
3. (3 pts each, 12 pts total) Given the following options for drawing a line in Processing:
   a. line(width/2, 0, width/2, height);
   b. line(0, width/2, 0, height, width/2);
   c. line(height/2, 0, height/2, width);
   d. line(0, 0, width/2, height/2);
   e. line(width, 0, 0, height);
   f. line(0, height/2, width, height/2);
   g. line(width, 0, width, height);
   h. line(0, 0, width, height);

   i. Which option (if any) will draw a horizontal line across the middle of the window?  __f____
   ii. Which option (if any) will draw a vertical line down the middle of the window?  ____a___
   iii. Which option (if any) will draw a diagonal line from the top left to the bottom right of the window?  __h____
   iv. Which option (if any) will draw a diagonal line from the top right to the bottom left of the window?  __e____

4. (3 pts each, 39 pts total) For each loop shown on the next page, give one of the following answers:
   • Infinite : If the loop loops forever (thus producing no picture).
   • Not shown: If the picture of the loop is not one of the options shown.
   • #n: Where n is the number of the image generated by that loop. The numbers are shown in the bottom right corner of each image (#1 to #11).

   For all, assume the size and color of the window is set using only the following commands:
   
   size(120,100);
   background(175);

   Be very careful, take your time – these can be tricky!
3. a) for (int i = 0; i < width; i+=20) {
    rect(i, i, 10,10);
}

5. b) for (int i = 0; i > width; i-=20) {
    rect(0,0, i,i);
}

11. c) for (int i = 0; i < width; i+=20) {
    rect(0,i, 10,10);
}

inf. d) for (int i = width; i > 0; i++) {
    rect(0,0, i,i);
}

9. e) for (int i = 0; i < width; i+=20) {
    rect(0,i, i,10);
}

2. f) for (int i = 0; i < width; i+=20) {
    rect(0, i, width-i,10);
}

NS. g) for (int i = 0; i < 5; i+=1) {
    rect(20*i, 0, 10,10);
}

1. h) for (int i = height; i > 0 ;i-=10) {
    rect(0, 0, i,i);
}

NS. i) for (int i = 0; i < width; i+=20) {
    rect(0,0, i,i);
}

4. j) for (int i = 0; i < 5; i+=1) {
    rect(10*i,10*i, 10,10);
}

6. k) for (int i = 0; i < width; i+=20) {
    for (int j=i; j < height; j+=20) {
        rect(i,j, 10,10);
    }
}

8. l) for (int i = 0; i < width; i+=20) {
    for (int j=0; j < height; j+=20) {
        rect(i,j, 10,10);
    }
}

7. m) for (int i = 0; i < width; i+=20) {
    for (int j=0; j < i; j+=20) {
        rect(i,j, 10,10);
    }
}
5. (4 pts each, 12 pts total) Suppose you have code that draws a rectangle in a random place in the window (see code below). You want the rectangle’s fill color to depend on its randomly chosen location (i.e. x,y). To set the color, you decide to use a conditional statement (e.g. if-else). What would this conditional statement have to be in order to set the color as follows.

a. The rectangle will have a blue fill color if its (x,y) position falls in the lower half of the window, and red otherwise.

```java
int x = random(width);
int y = random(height);
// add your code here:
if ( y < height/2) {
    fill(255,0,0);
} else {
    fill(0,0,255);
}
rect(x,y,20,20);
```

Alternatively:

```java
if ( y >= height/2) {
    fill(0,0,255);
} else {
    fill(255,0,0);
}
```

b. The rectangle will have a red fill color if its position falls in the lower left quadrant of the window, and blue otherwise.

```java
if ( y > height/2  &&  x < width/2) {
    fill(255,0,0);
} else {
    fill(0,0,255);
}
```

Alternatively:

```java
if ( y < height/2  ||  x > width/2) {
    fill(0,0,255);
} else {
    fill(255,0,0);
}
```
c. The rectangle will have a red fill color if its position falls in the top third, green in the middle third, and blue in the bottom third.

```java
if (y < height/3) {
    fill(255,0,0);
} else if (y < 2*height/3) {
    fill(0, 255,0);
} else {
    fill(0,0,255);
}

Alternatively:

if (y >= 2*height/3) {
    fill(0,0,255);
} else if (y >= height/3) {
    fill(0, 255,0);
} else {
    fill(255,0,0);
}
```
6. (2 pts each, 8 pts total) Assuming n is declared and initialized as:
   ```
   int n = 0;
   ```
   What is the value of the variable n after each of the following commands (or indicate if the command triggers an error.)
   
   i. n = 2 * n;  ___0_____
   ii. n = 2 + 3 * 8;    ___26_____  
   iii. n = 3/6;     ___0______
   iv. n = 20 % 3;    ___2______

7. (8 pts) Identify all lines which would generate an error when running the code.
   
   ```
   Line 1.   int s = 300.0;
   Line 2.   float b = 100.0;
   Line 3.   b = random(255);
   Line 4.   background(50,50,50);
   
   Line 5.   void setup() {
               size(s,s);
   
   Line 6.   float r = random(255);
   Line 7.   }
   
   Line 8.   int w;
   Line 10.  void draw() {
               w = 40;
   
   Line 12.  fill(r,0,b);
   Line 13.  rect(mouseX, mouseY, w, w);
   Line 14.  }
   ```
   
   Answer:
   Line 1: Can’t set an int to a float.
   Line 2: Only declarations can be outside of functions.
   Line 4: Only declarations can be outside of functions.
   Line 12: r is not defined in draw().
   
   Line 6: This is actually ok except for the fact that s has no initial value. If you answered that it would generate an error because of the error in Line 1, then credit will be given. If you said that it will not generate an error, then you will also get credit.
